# Modern tube compressor

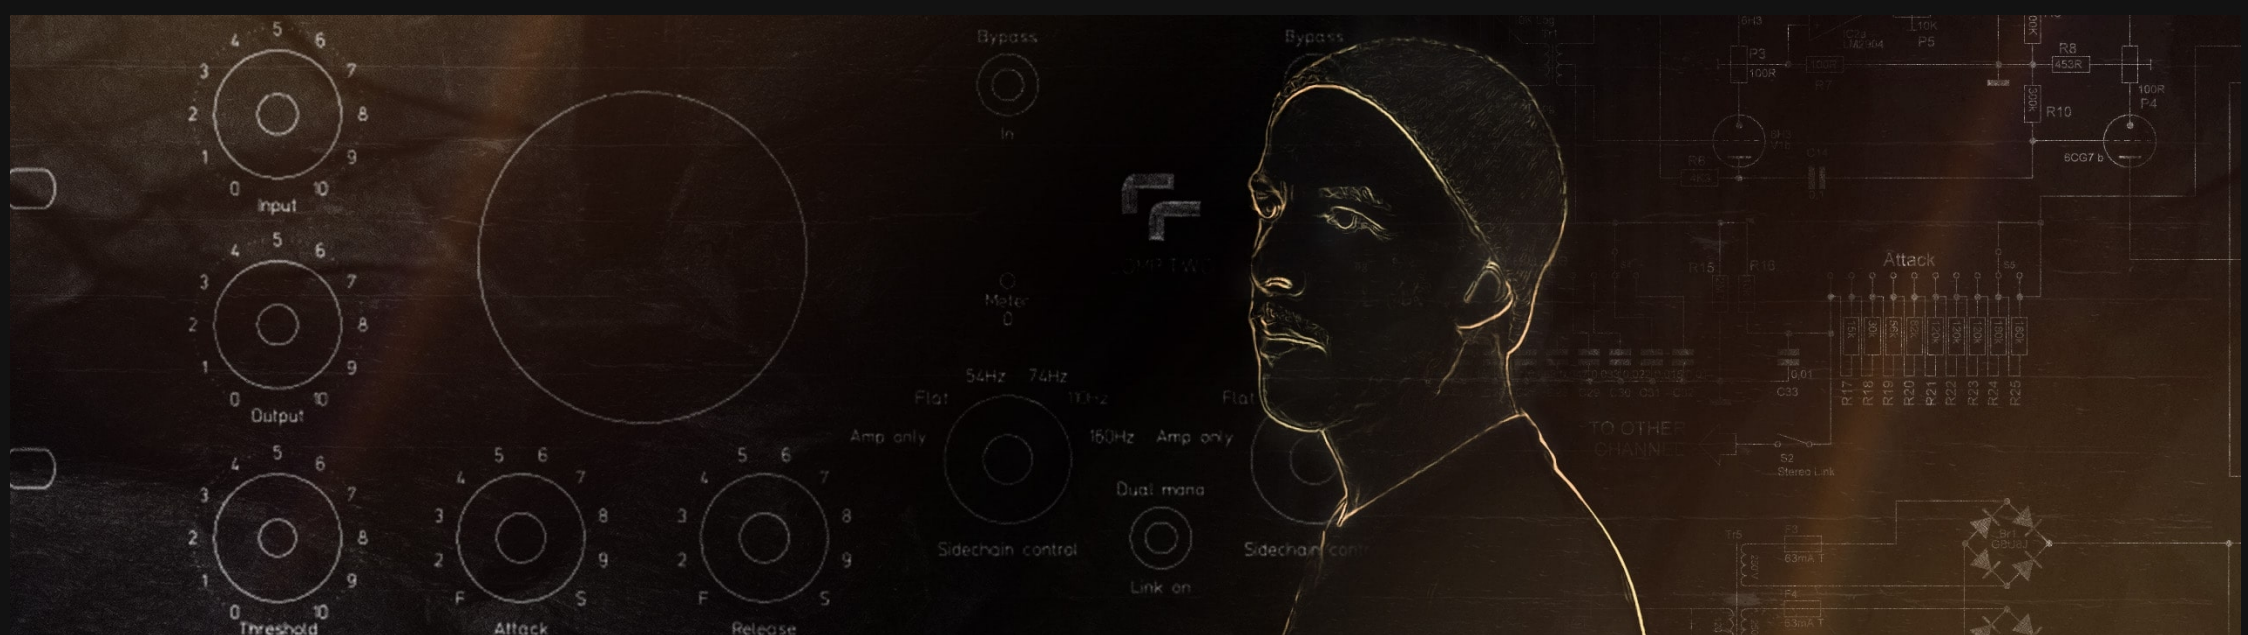

# PROCESS.AUDIO RELEASES COMP.TWO

New York, June 17, 2023

Today, PROCESS.AUDIO is proud to announce the release of COMP.TWO, a state-of-the-art plugin that faithfully emulates the renowned all-tube Vari-MU compressor by rockruepel (Rock-Bully). With its advanced features, exceptional sound quality, and intuitive controls, COMP.TWO is set to revolutionize the world of audio compression.

The COMP.TWO plugin is the result of a relentless quest for perfection by Oliver Gregor, the mastermind behind rockruepel. Combining his passion for music and electrical engineering, Gregor dedicated years of research and development to elevate the vari-mu compressor design to meet the demands of the modern workflow and 21st-century sonics. The COMP.TWO represents the logical evolution of COMP.TWO, incorporating two decades of user feedback, testing, and innovation.

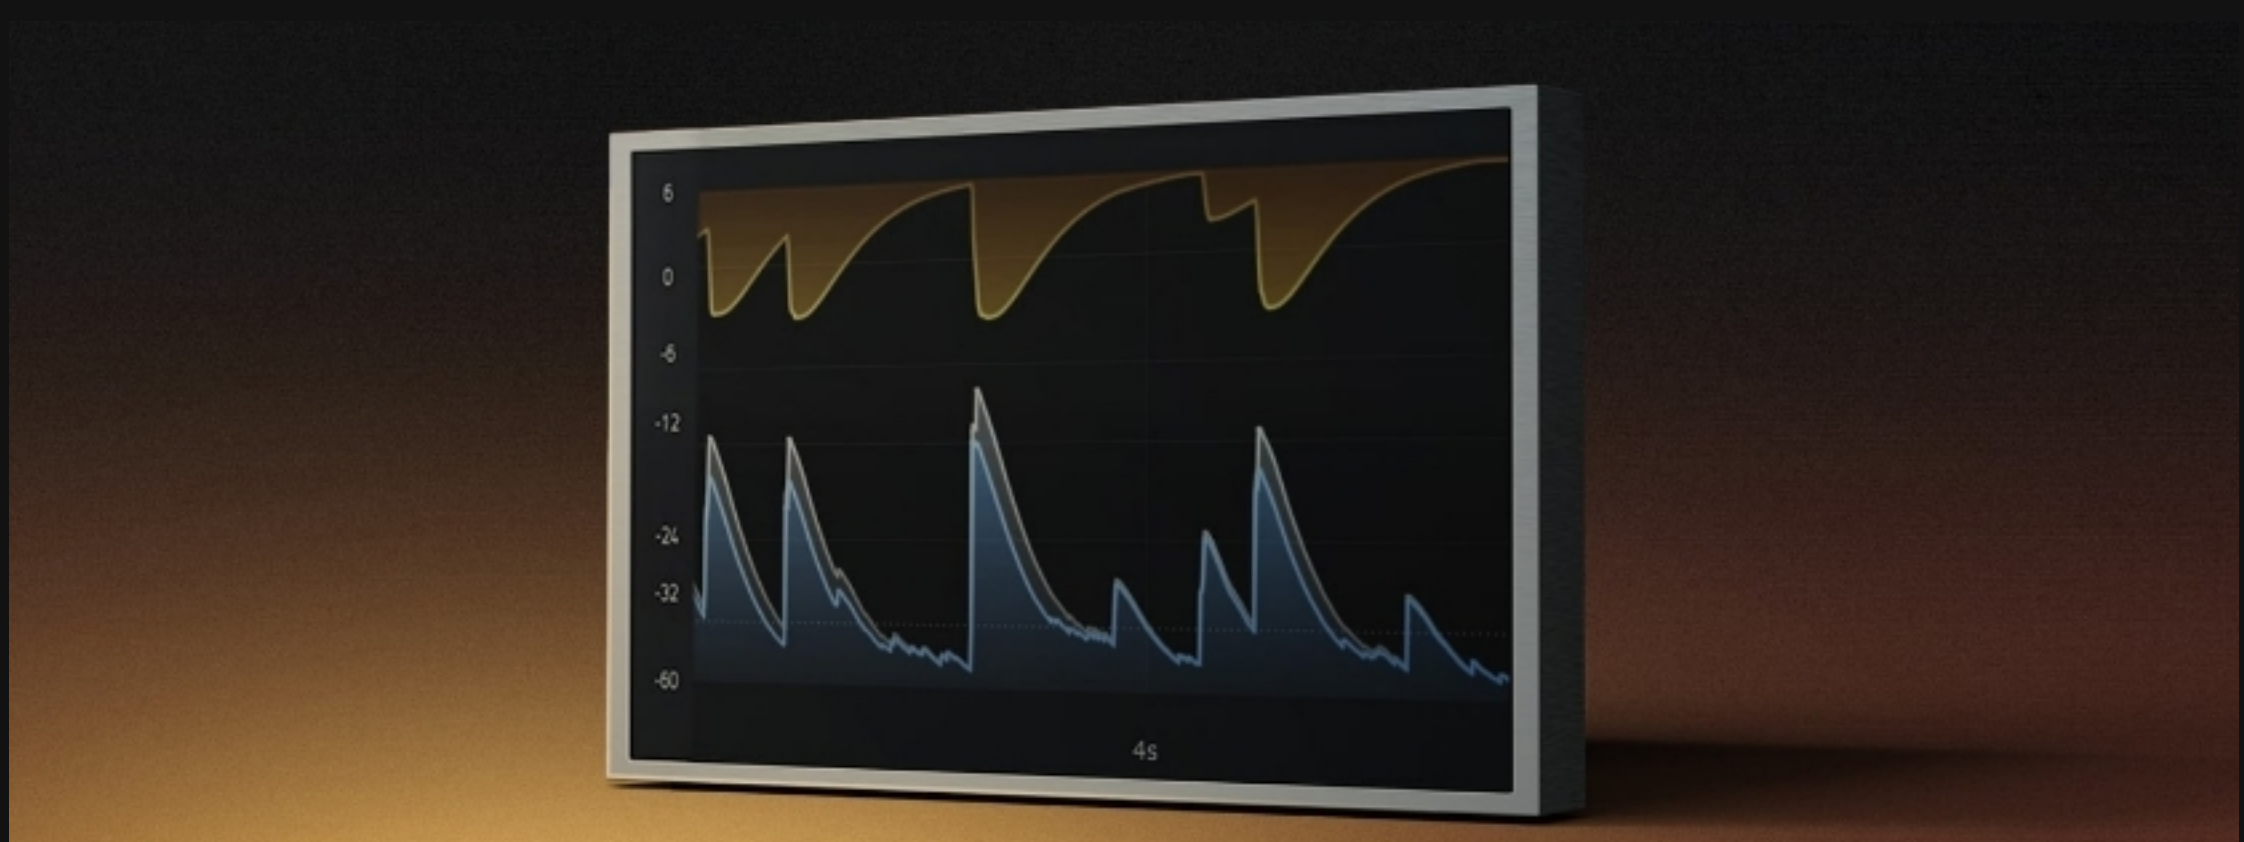

Featuring an all-tube variable-mu design, COMP.TWO stands out in the market as a truly audiophile-grade compressor. Unlike traditional compressors, there are no transistor stages in its circuit, ensuring pristine audio quality and an unparalleled sonic experience. The use of the same output tubes found in legendary compressors like Altec and RS124, along with meticulously crafted Sowter transformers in the output stage, provides a distinctive vintage vibe that can be enjoyed with or without compression.

One of the key highlights of COMP.TWO is its versatility. Designed with the modern audio engineer in mind, this plugin allows for precise control over the sound. Whether you need a clean compression or a warm and gritty character, COMP.TWO can deliver it all. Its modern controls, including the Console Remote for centralized control, MS capabilities, high-pass filter on a sidechain, DRY/WET control, and a wide range of presets created by renowned producers and mixers, make it a powerful tool for any audio production.

To enhance the user experience and facilitate accurate gain matching, PROCESS.AUDIO has incorporated a visually pleasing gain reduction visualizer into COMP.TWO. This feature provides real-time feedback, enabling users to grasp the impact of their settings on the program material effectively.

COMP.TWO comes bundled with over 100 professional presets, meticulously crafted for various instruments and mixing scenarios. Whether you're working on drums, guitar, synth, bass, or even full mixes or mastering, these presets provide instant access to that perfect sound, saving precious time during production.

COMP.TWO is now available for purchase on the PROCESS.AUDIO website and selected audio plugin retailers. For more information, please visit [www.process.audio/comptwo](http://www.process.audio/comptwo).

#### About PROCESS.AUDIO:

PROCESS.AUDIO is a leading audio software company specializing in developing innovative and high-quality audio plugins. With a team of experienced engineers and designers, PROCESS.AUDIO is dedicated to providing cutting-edge tools that inspire creativity and deliver outstanding sound quality to musicians, producers, and audio professionals worldwide.
